

Grip products:

Our Club has in stock two brands of polish/grip products – Wilgrip and Betts. If you feel the need to use, or are using, these products please read below.

There is no bowls polish or grip product that is suitable for use on our synthetic surface. All polishes and grip products gradually adhere to the bowling surface attracting dust and leaving dirty track marks on the playing surface.

You can however use the grip products we have in stock on your hands. Another good product is the Grippit cloth (available from Hunter Bowls), especially good in wet conditions and/or if you have trouble with holding your bowl. *(Just cut a piece off and tuck it in your pocket for easy access.)*

This is available through Hunter Bowls NZ.

Note: You can use the grip products on your bowls when playing on grass surfaces.

If you keep your bowls clean using the process below, you are less likely to need the use of grip products on your bowls.

- 1. Use a wooden toothpick to clean the grips.** Many lawn bowls have grips to help you hold the bowls more easily during gameplay. Dirt and grime can quickly build up in the grips, especially if your bowls have ring or groove grips. Before washing your bowl, chip any stubborn dirt out of the grips with a large wooden toothpick (not metal).
- 2. Wash the bowls in warm water with mild detergent, eg dishwashing liquid**
Rub the bowls with your hands or a microfibre washcloth to dislodge any stubborn dirt.
- 3. Dry the bowls with a microfibre towel or soft cloth, or airdry them.**
